   e. Structural Reforms

3. People to People Connectivity
   a. Business Mobility ABTC
   b. Student and Researcher Mobility
   c. Tourism Facilitation
   d. Professional Mobility (new)
   e. Labour Mobility

ABAC Major Initiatives on Connectivity Blueprint

Initiatives continued from previous year
• APIP
• Infrastructure Enablers Checklist
• Supply Chain Connectivity --- Global Data Standards

New Initiatives introduced and ongoing in 2014
• Resilient ICT infrastructure
• Enhance Connectivity by Quality Transport
• APEC Workers Travel Card
1. The individual elements must be **bankable**, and together the outcomes **must have meaning and be effective for business and consumers**

- Coordination and Implementation are critical
  - 18 different APEC Fora and Process are being tapped to form the Blueprint
  - Even in one economy, **coordination over this number of agencies is challenging**

2. The Blueprint must **forward looking and promote innovation and resilience in value and supply chains**

- **Soft and hard infrastructure improvements**
  - and systems must therefore be critical foundations.
  - Soft infrastructure determines the quality and effectiveness of connectivity
  - Regional (spanning than one economy) infrastructure and connectivity elements needed
3. The Blueprint should be **tangible and precise enough to enable the timeliness and quality of implementation** to be monitored and assessed by the market place and formally if necessary.

4. **Connecting the poorly connected parts of the region should be a priority** to boost growth and deepen integration.
ABAC is committed to working with APEC....

on effective implementation of the Connectivity Blueprint and key individual initiatives that will have a positive impact on economic growth and integration
