Asia-Pacific Economic Cooperation (APEC) was established in 1989. The 21 Member Economies are Australia; Brunei Darussalam; Canada; Chile; China; Hong Kong, China; Indonesia; Japan; Korea; Malaysia; Mexico; New Zealand; Papua New Guinea; Peru; the Philippines; Russia; Singapore; Chinese Taipei; Thailand; United States; and Viet Nam.

The APEC Policy Support Unit (PSU) was established in 2008 as the policy research and analysis arm for APEC. It supports APEC members and fora in improving the quality of their deliberations and decisions and promoting policies that support the achievement of APEC’s goals by providing objective and high quality research, analytical capacity and policy support capability.

APEC in Charts was launched by the APEC Policy Support Unit in 2013 to provide a graphical overview of the APEC region’s economic, trade, investment and policy-related performance. If you have any feedback, please write to us at email: psugroup@apec.org.
Table of Contents

APEC in the Global Economy, 2014 3

APEC Macroeconomic Indicators

1.1 GDP Per Capita (current USD), 2014 4
1.2 Real GDP Growth (year-on-year percent change), 2014 5
1.3 Real GDP Per Capita Growth (year-on-year percent change), 2000 - 2014 6
1.4 Consumer Price Index (year-on-year percent change), 2013-2014 7
1.5 Labor Force Participation Rate (percent), 2014 8
1.6 GDP Per Person Employed (in 2011 PPP), 2014 9
1.7 Stock Market Performance in APEC (index points, 1 January 2014 = 100), 1 January 2014 - 30 September 2015 10

APEC Trade Indicators

2.1 Value of APEC Trade (USD trillion), 2000 - 2014 11
2.2 Nominal Trade Growth in APEC (annual percent change), 2000 - 2014 12
2.3 Share of Intra-regional Trade in APEC (percent share), 2014 13
2.4 Top 10 Exports from APEC to the World by Value (percent share), 2014 14
2.5 Top 10 Imports from the World to APEC by Value (percent share), 2014 15
2.6 Top 10 Most Traded Products in APEC by Value (percent share), 2014 16

APEC Trade Liberalization

3.1 MFN Applied Tariff Rates in APEC (simple average), 2006 - 2013 17
3.2 MFN Applied Tariff Rates above 10% and Duty-free (percent share), 2006 - 2013 18
3.3 Free Trade Agreements (FTAs) in APEC (cumulative number), pre-1994-2014 19
3.4 Share of Trade by Value Covered by FTA Partners (percent), 2014 20
3.5 Non-Tariff Measures (NTMs) (year-end number), 2008 - 2013 21

APEC Investment Indicators

4.1 FDI Inflows and Outflows in APEC (value in USD billion, share in percent), 2000 - 2014 22
4.2 Top 5 APEC FDI Hosts and Sources (percent share), 2014 23
4.3 Policy Rates (percent), 2014 - 2015 24

APEC Structural Indicators

5.1 Doing Business in APEC (average), 2010 - 2014 25
5.2 Logistics Performance Index (overall score), 2014 26
5.3 Women’s Educational Attainment Relative to Men’s (scale 0 - 100), 2008 - 2014 27
5.4 Number of People Undernourished (million), 2005 - 2014 28
5.5 Disaster Risk Exposure and Preparedness (index), 2015 29

Data Notes 30
Nominal GDP of the APEC region stood at USD 44 trillion in 2014, accounting for 57% of global GDP.

In 2014, the value of APEC members’ total exports and imports reached USD 18.5 trillion, equivalent to 49% of total world trade.

An estimated 2.8 billion people lived in the APEC region in 2014, accounting for 39% of the world’s population.
There is a wide variation in the nominal GDP per capita in the region, which ranged from USD 2,000 to USD 62,000 in 2014, indicating the diversity of APEC economies in terms of economic development.
The APEC region posted a real GDP growth of 3.2% in 2014, higher than the world GDP growth of 2.5% during the year. Uncertainties surrounding the path of oil prices, moderation of growth in China, and the timing of monetary normalization in the United States combined with domestic factors such as lower household spending resulted in diverging growth paths among members.
In 2014, the real GDP (in 2005 USD) per person in the APEC region grew by 4.3%, compared with 3.4% growth in the rest of the world. The APEC region has consistently outpaced the rest of the world in terms of real GDP per capita growth in 2000-2014.
Inflation rates across the APEC region increased from an average of 2.8% in 2013 to 3.1% in 2014. Accommodative financial conditions from relatively low policy interest rates and quantitative easing combined with strong credit growth contributed to higher inflation levels in 2014.
The total labor force participation rate in the APEC region in 2014 averaged 66%, lower than the 69% recorded a year ago. The decline may be attributed to the structural shifts in the labor market, particularly an aging workforce as well as slack demand as global economic activity proceeds at a slower pace. The female labor force participation rate averaged 56%, at par with the world rate of 55%, while the male participation rate at 75% is lower than the world rate of 81%.
GDP per person employed, an indicator of labor productivity, averaged $39,578 across the APEC region in 2014, which represented a 3.3% increase from 2013. Based on this indicator, productivity increased in all APEC economies in 2014.
Stock markets in APEC economies experienced more volatility in 2015 compared with 2014. In 2015, the average coefficient of variation—which measures an index’s standard deviation relative to the mean—for APEC stock markets reached 6.1% from 5.1% in 2014. Moreover, stock market performance has diverged since 2014. As of 30 September 2015, three stock markets posted indices that were at least 10% higher than their 1 January 2014 levels, while six stock markets registered indices that were at least 10% lower during the same comparable period.
The value of APEC members’ aggregate trade increased three-folds to USD 18.5 trillion in 2014 from USD 6.4 trillion in 2000, growing at an average annual rate of 10.4% during the period. Intra-regional trade also kept pace, expanding by around 2.7 times during the same period from USD 4.5 trillion to USD 12.1 trillion.

Total exports of goods in the APEC region climbed to USD 9.1 trillion in 2014, of which 65.3% were intra-regional exports. APEC imports were higher at USD 9.4 trillion, of which 65.4% were sourced from other APEC economies.
Trade growth in the region has been slowing down in recent years, reflecting the uneven economic recovery in the aftermath of the global financial crisis. The value of APEC’s total exports grew by 1.9% in 2014 while total imports grew 0.3%, with intra-regional trade outperforming trade with the rest of the world during the year.
In 2014, at least 84% of intra-APEC trade-in-goods was accounted for by the top 5 APEC exporters and importers. China was the largest exporter of goods while the US was the largest importer.
The top 10 product exports accounted for 33% of the total value of APEC’s exports to the world in 2014 (using the Harmonized System 4-digit headings). Electronics and petroleum oils were the top export products at 5.1% and 5.0% of total value, respectively.
The top 10 products imported by APEC economies accounted for 36.8% of the total value of imports in 2014 (using the Harmonized System 4-digit headings). Petroleum products, electronics, and cars were the leading imports, with crude petroleum oils being the largest at 9.5% of total import value.
The top 10 most traded product groupings within the APEC region accounted for 33% of total exports from APEC members to other APEC members in 2014 (using the Harmonized System 4-digit subheadings). Electronic and petroleum products are among the most traded within the region, with electronic integrated circuits and micro-assemblies getting the biggest share at 7.0% of total intra-APEC export value.
The average MFN applied tariff rate for all products in the APEC region declined from 7.1% in 2006 to 5.8% in 2013. A similar downward trend is seen in the MFN applied rates of agricultural products (from 13.4% in 2006 to 12.2% in 2013) and non-agricultural products (from 6.1% in 2006 to 4.7% in 2013).
Among APEC member economies, the share of products (based on 6-digit subheadings) that are duty-free steadily increased from 39% in 2006 to 46% in 2013. Meanwhile, the percentage of products (based on 8-digit tariff lines) subject to MFN applied rates above 10% declined from 20% in 2006 to around 14% in 2013.
The number of free trade agreements (FTAs) signed by APEC members expanded 12-fold over the past 20 years. As of 2014, APEC members have signed a total of 157 FTAs, 58 of which are with at least one other APEC member. Of the FTAs signed, 149 are still in force, 54 of which are with at least another APEC member.
In 2014, around 44% of APEC’s total exports were covered by FTA partners, while 39% of the region’s imports were under FTAs. These levels were significantly higher than in 1996, when only around 22% of exports and 9% of imports were covered by FTAs.
In general, APEC members were more affected by anti-dumping, countervailing and safeguard measures. Year-end 2013 numbers show increases in both the number of APEC members that imposed and are affected by these measures.
In 2014, the APEC region experienced more outflows of foreign direct investments (FDI) at USD 960 billion compared to inflows of USD 652 billion. As a share of world FDI, APEC’s inflows were also lower at 53% compared to 57% in 2013 while outflows increased minimally. The movement of FDI flows in 2014 was influenced by uncertainties on the timing and magnitude of the US monetary policy rate normalization as well as the uneven global economic recovery.
In 2014, about 68% of the inflows to the APEC region went to five member economies, equivalent to USD 446 billion, while 79% of the FDI outflows worth USD 761 billion came from five APEC members.
Monetary policy rates impact on investments by influencing the level and direction of interest rates. Low levels of interest rates via accommodative monetary policy settings, therefore, encourage investment spending.

Economies that use benchmark overnight interest rates as their main monetary policy levers have either maintained or reduced their policy rates as of August 2015 compared to end-2014 levels. Among the APEC members, nine economies opted to reduce their respective monetary policy rates while the rest kept their key interest rates steady. Interest rates were kept relatively low to support economies’ growth requirements amid the uneven pace of global economic activity.
On average, it takes 6 procedures to start a business in APEC economies in 2014. In industrialized APEC economies this average is 4 procedures, while it takes 7 procedures in developing economies.

The average number of days to start a business in APEC went down from 28 days to 21 days between 2010 and 2014. It takes three times longer to start a business in developing economies than in industrialized economies: in 2014, it took 26 days to start a business in developing economies, compared with 7 days in industrialized economies.
On average, APEC economies scored 3.4 (out of a best score of 5) on the Logistics Performance Index (LPI) in 2014. The LPI tracks economies’ performance on customs, infrastructure, international shipments, logistics quality and competence, tracking and tracing, and timeliness.
Women’s educational attainment measures (on a scale of 0-100, with 100 as the highest) how close women are to achieving parity with men in terms of literacy; net primary school enrollment; net secondary school enrollment; and gross tertiary enrollment. The educational attainment of women in the APEC region has improved from 98.1 in 2008 to 99.0 in 2014, which is almost at par with the educational attainment of males in the region.
In less than a decade, the number of undernourished people in APEC decreased by more than 100 million, from 308.2 million in 2005 to 202.9 million in 2014.
While there is just a small gap between industrialized and developing economies in terms of hazard and exposure to disaster risk, there are larger gaps in terms of the population’s vulnerabilities and capacity to cope with disasters. Although exposure to natural disasters is an accident of geography, policies can reduce socio-economic vulnerabilities and increase the capacity to cope with disasters.

StatsAPEC

StatsAPEC is APEC’s statistics portal with data dating back to APEC’s inception in 1989. It consists of the Key Indicators Database and the Bilateral Linkages Database. The Key Indicators Database includes over 120 GDP, trade, financial and socio-economic indicators, allowing for an analysis of trends across a number of topics. The Bilateral Linkages Database facilitates detailed analysis of trade and investment flows between APEC economies and within APEC. APEC aggregates are available for most indicators in StatsAPEC, making it easy to examine the region as a whole.

StatsAPEC is available at statistics.apec.org and is optimized for use on mobile devices.
